

WINNER

EXCELLENCE IN TIMBER DESIGN
Judges' Innovation Award

THE GREEN

Australand

ARCHITECT: SJB ARCHITECTS

STRUCTURAL ENGINEER: IRWIN CONSULTING

FABRICATOR: TIMBERTRUSS

BUILDER: AUSTRALAND HOLDINGS PTY LTD AND CITTA PROPERTY GROUP

PHOTOGRAPHER: AUSTRALAND HOLDINGS PTY LTD

The judges were so impressed with the level of timber innovation this year that for the first time they decided to create their own Award – the Judges' Innovation Award. The innovation shown by three entries was particularly impressive and they were the finalists. David Bylund Architect's Wespine Kiln Control Facility developed a hybridisation of a timber studs cross-laminated with an OSB structural panel to create a rigid, modular wall element. WilderCoyle's House of Cupboards used solid timber to create structural cupboards that are integral to the load-bearing structure that support the buildings. The winner, Australand's The Green, was selected due to the revolutionary panelised timber floor system. This 'hybrid' construction methodology combines commercial disciplines utilising a domestic trade base.
